In mathematics, a partial function from X to Y (sometimes written as f : X ↛ Y or f: X ↛ Y) is a function f: X ´ → Y, for some subset X ´ of X.It generalizes the concept of a function f : X → Y by not forcing f to map every element of X to an element of Y (only some subset X ´ of X).If X ´ = X, then f is called a total function for emphasizing that its domain is not a proper ...

Definition. An integral domain is basically defined as a nonzero commutative ring in which the product of any two nonzero elements is nonzero. This definition may be reformulated in a number of equivalent definitions : An integral domain is a nonzero commutative ring with no nonzero zero divisors.; An integral domain is a commutative ring in which the zero ideal {0} is a prime ideal.

A function is a relation that uniquely associates members of one set with members of another set. More formally, a function from A to B is an object f such that every a in A is uniquely associated with an object f(a) in B. A function is therefore a many-to-one (or sometimes one-to-one) relation. The set A of values at which a function is defined is called its domain, while the set f(A) subset ...

We study geometric properties of GL-spaces. We demonstrate that every finite-dimensional GL-space is polyhedral; that in dimension 2 there are only two, up to isometry, GL-spaces, namely the space whose unit sphere is a square (like ℓ_∞^2 or ℓ_1^2) and the space whose unit sphere is an equilateral hexagon.
