James Clerk Maxwell nacque il 3 giugno 1831 a Edimburgo da John Clerk Maxwell e Frances Cay. A quel tempo Michael Faraday stava completando i suoi studi sull'induzione magnetica, un fenomeno che lui avrebbe contribuito a spiegare. Il giovane Maxwell crebbe nella tenuta del padre nella campagna scozzese.. Tutti gli indizi suggeriscono che Maxwell avesse un'instancabile curiosità fin da bambino.

Die Maxwell-Gleichungen von James Clerk Maxwell (1831-1879) beschreiben die Phänomene des Elektromagnetismus. Sie sind damit ein wichtiger Teil des modernen physikalischen Weltbildes. Die Gleichungen beschreiben, wie elektrische und magnetische Felder untereinander sowie mit elektrischen Ladungen und elektrischem Strom unter gegebenen Randbedingungen zusammenhängen.

Maxwell's Equations are a set of four vector-differential equations that govern all of electromagnetics (except at the quantum level, in which case we as antenna people don't care so much). They were first presented in a complete form by James Clerk Maxwell back in the 1800s. He didn't come up with them all on his own, but did add the displacement current term to Ampere's law which made them ...
