Lung volume reduction surgery (LVRS) produces physiological, symptomatic, and survival benefits in selected patients with advanced emphysema. Because it is associated with significant morbidity, mortality, and cost, nonsurgical alternatives for achieving volume reduction have been developed.

Bronchoscopic Lung Volume Reduction in Severe Emphysema

Lung volume reduction surgery (LVRS). In this procedure, a surgeon removes the upper part of one or both of your lungs. The goal is to take out your nonworking air sacs so it's easier to breathe. This is major surgery, so your heart has to be strong and the rest of your lungs need to be healthy before you can have it.
