The syntheses of almost all N-heterocycles have now been successfully performed under microwave irradiation and have provided significant improvements in the reaction time and efficiency. The peculiar properties of dielectric heating give it the ability to strongly promote cyclocondensation, cycloaddition an

The development of new strategies for synthesis of medium-sized heterocycles has remained a highly attractive but challenging proposition. In the last few years, the application of microwave irradiation has greatly facilitated the construction of such heterocyclic ring systems through a myriad of different synthetic approaches.

Chapter 3 Microwave-assisted synthesis of heterocycles 117 microwave irradiation [31]. At the bottom of Scheme 3.22 another Suzuki coupling is shown, which was speeded-up by a factor of 100 [32]. We have already seen one example of a hetero-Diels–Alder reaction involving acyclic components.
