Developing an end-point assessment plan

Iodine in water solutions is usually colored strong enough so that its presence can be detected visually. However, close to the end point, when the iodine concentration is very low, its yellowish color is very pale and can be easily overlooked.

Iodometric titration - detection of end point with starch

"Titration" is a common laboratory technique used to determine the concentration of one chemical compound or analyte based on its complete reaction with another compound or titrant whose concentration is known.

How to Calculate End Point | Sciencing

How do we detect end point of the acid-base titration? Short answer is - when indicator changes its color. However, color change is not instant (see acid-base indicators). Sometimes it seems like it is - very small drop of the titrant completely changes solution color, but sometimes - depending on the concentration of titrant and titrated substance, as well as on the selected indicator - we ...
