**Return the Sum of Two or More Columns with VLOOKUP | Excel ...**

In its simplest form, the VLOOKUP function says: =VLOOKUP(Value you want to look up, range where you want to lookup the value, the column number in the range containing the return value, Exact Match or Approximate Match - indicated as 0/FALSE or 1/TRUE).

**VLOOKUP function - Office Support**

(Answering here as no separate question for sorted data.) If the data were sorted, you could use VLOOKUP with the range\_lookup argument TRUE (or omitted, since it's the default), which is officially described for Excel as "search for approximate match".. In other words, for sorted data: setting the last argument to FALSE returns the first value, and; setting the last argument to TRUE returns ...

If your lookup number is stored as text, and the original number in the table is real number format,

please apply the following formula to return the correct result:

**How to vlookup numbers stored as text in Excel?**

In this tutorial, you learn how to use VLOOKUP in Excel in 6 (easy) steps. You also learn how to fix common VLOOKUP errors. Read now.

**The last guide to VLOOKUP in Excel you'll ever need ...**

When deciding between which vertical lookup formula to use, the majority of Excel experts agree that INDEX MATCH is a better formula than VLOOKUP.. However, many people still resort to using VLOOKUP because it's a simpler formula. One major driver of this problem is that most people still don't fully understand the benefits of switching from VLOOKUP, and without such an understanding, they ...

**Why INDEX MATCH is Better Than VLOOKUP - MBA Excel**

In Excel, it appears #N/A when it cannot find the relative correct result by using VLOOKUP formula. But in sometimes, you want to return zero instead of #N/A when using VLOOKUP function which may make the table look much nicer.

**How to VLOOKUP and return zero instead of #N/A in Excel?**

This Excel tutorial explains how to use the Excel VLOOKUP function with syntax and examples. The VLOOKUP function performs a vertical lookup by searching for a value in the first column of a table and returning the value in the same row in the index\_number position.

**MS Excel: How to use the VLOOKUP Function (WS)**

As you see, the function has 4 parameters, or arguments. The first three parameters are required, the last one is optional. lookup\_value is the value to search for.. This can be either a value (number, date or text) or a cell reference (reference to a cell containing a lookup value), or the value returned by some other Excel function. For example:
